

.NET test assignment

Test Assignment

The purpose of this test assignment is to demonstrate the skills of building scalable and resilient services.

We will assess code structure, patterns applied, solution completeness and correctness.

Description

Build a REST service to measure distance in miles between two airports. Airports are identified by 3-letter IATA code.

To get airport details HTTP call shall be used, sample for AMS airport:

```
GET https://places-dev.cteleport.com/airports/AMS HTTP/1.1
```

It's allowed to use any 3-rd party components/frameworks.

Solution has to be based on dotnet core 5.0+

The code must be shared with us as .zip archive via email.
